PROTECTOSEAL®
Safety Without Compromise

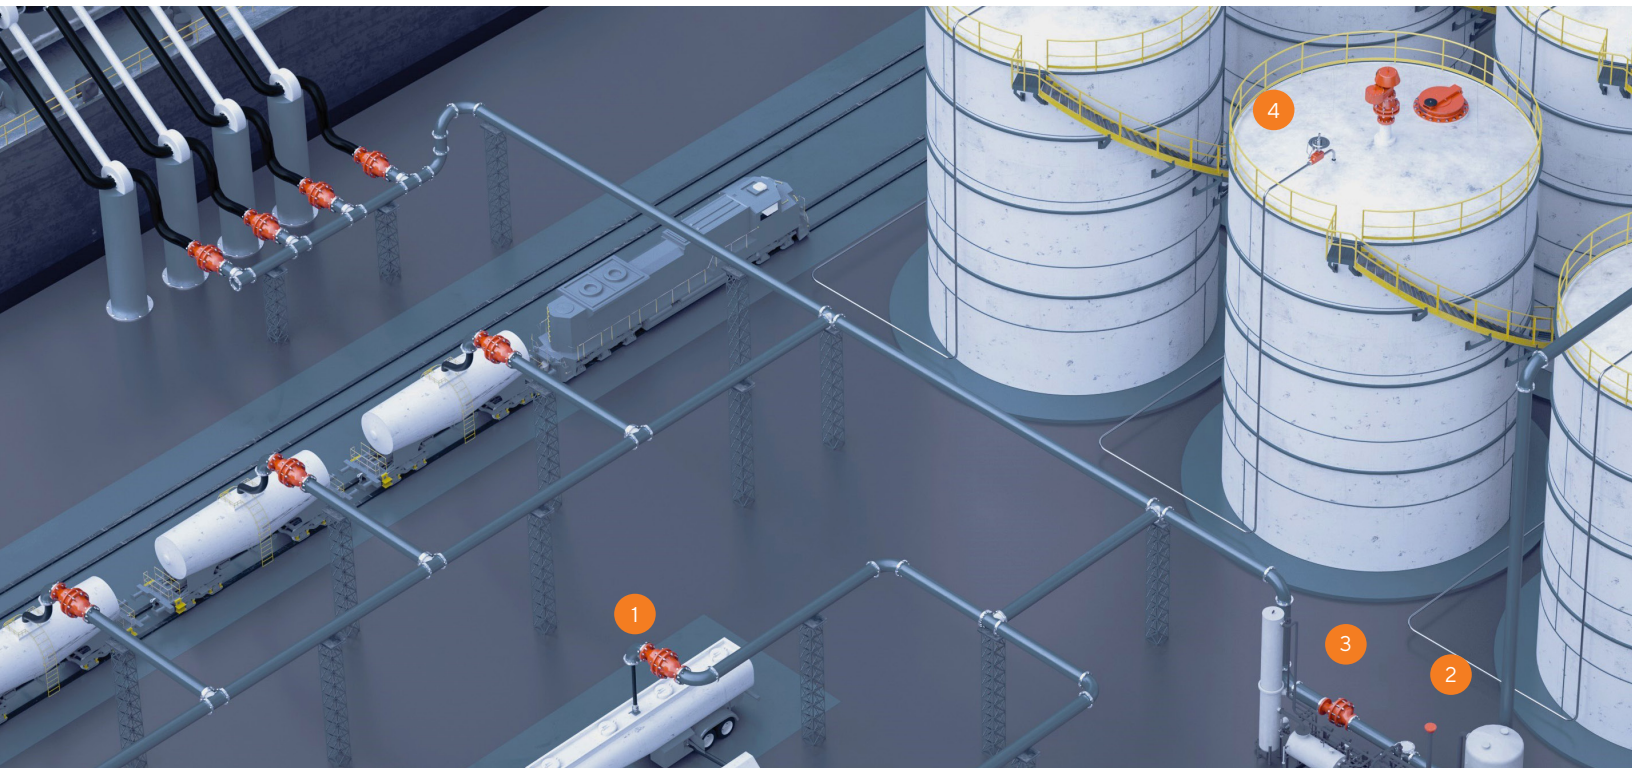

The safety experts

Protectoseal has engineered an innovative range of products designed specifically to minimize both the risks and costs associated with the protection of people, equipment and the environment.

The likelihood of a VOC ignition leading to a potentially catastrophic explosion is an ever-present danger in the fuel

distribution sector. Simple but effective explosion protection devices are a pre-requisite when working in the extremely hazardous environments encountered in vapor recovery and associated operations. Operational requirements demand absolute reliability, minimal maintenance and cost effective solutions.

See below for a wide range of products with the following approvals; FM, UL, USCG & ATEX.

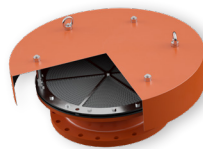

1

In-Line Detonation Arresters
UCA

2

End-of-Line Deflagration Arresters
EVA

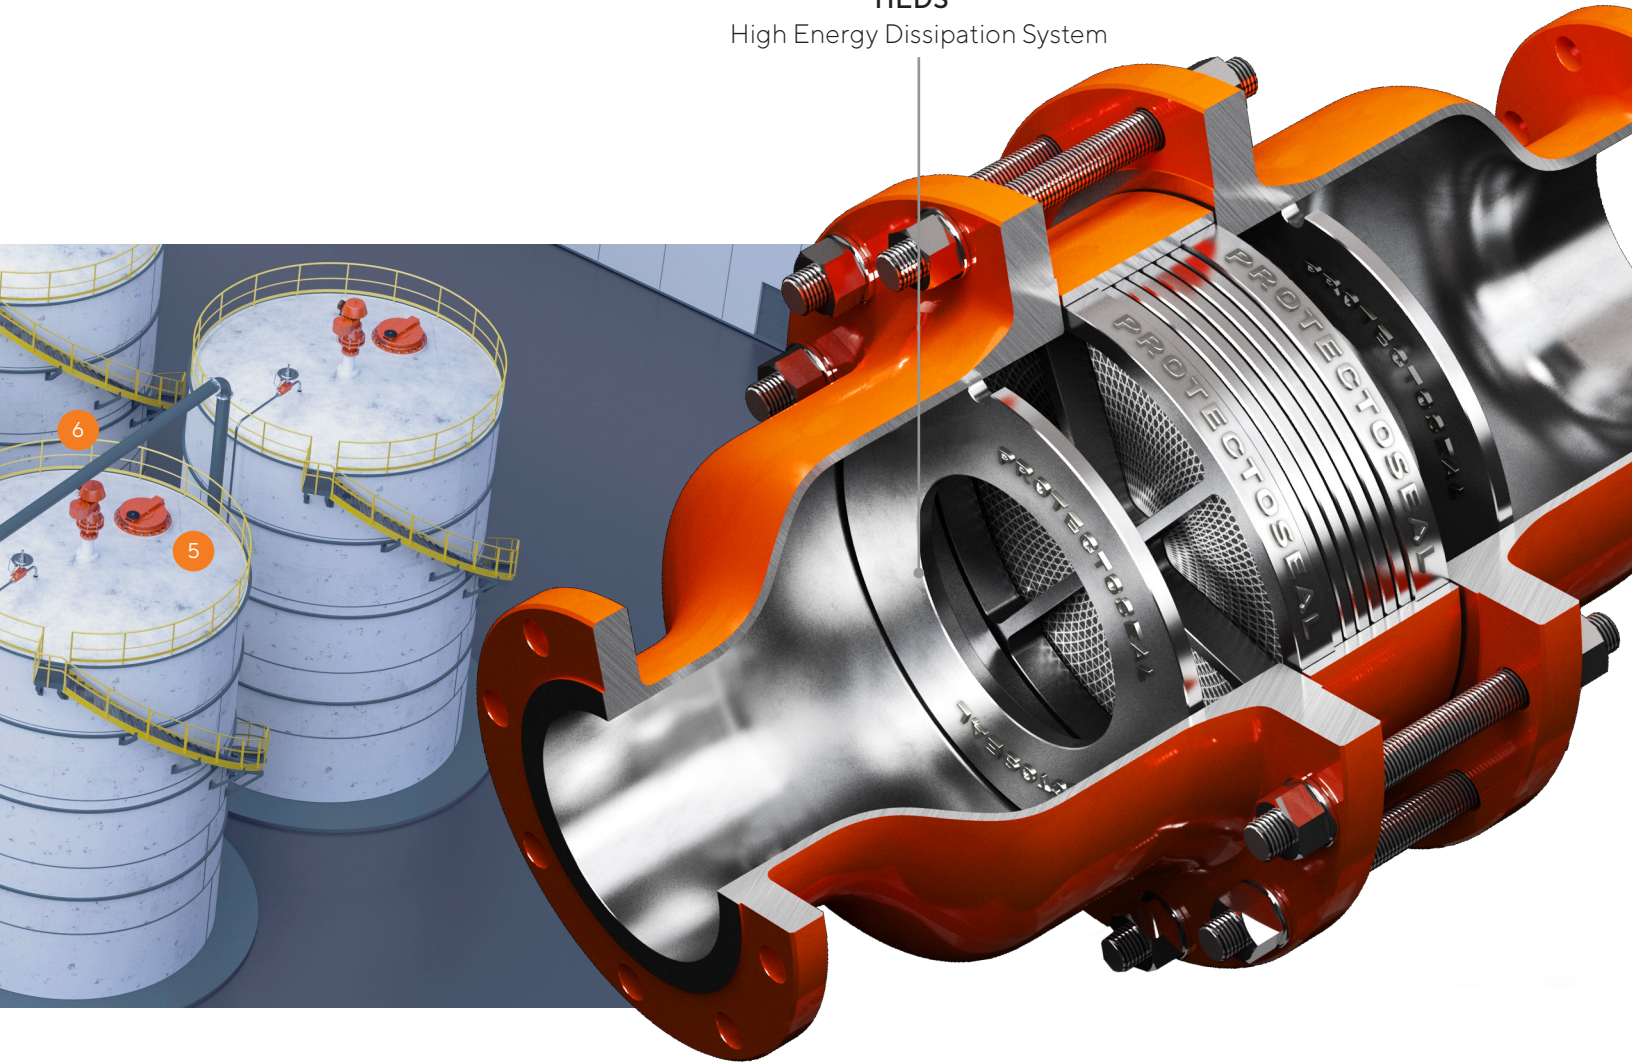

3

In-Line Deflagration Arresters
LEA

In-Line UCA

HEDS®
High Energy Dissipation System

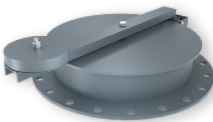

4

Tank Blanketing Valves
20

5

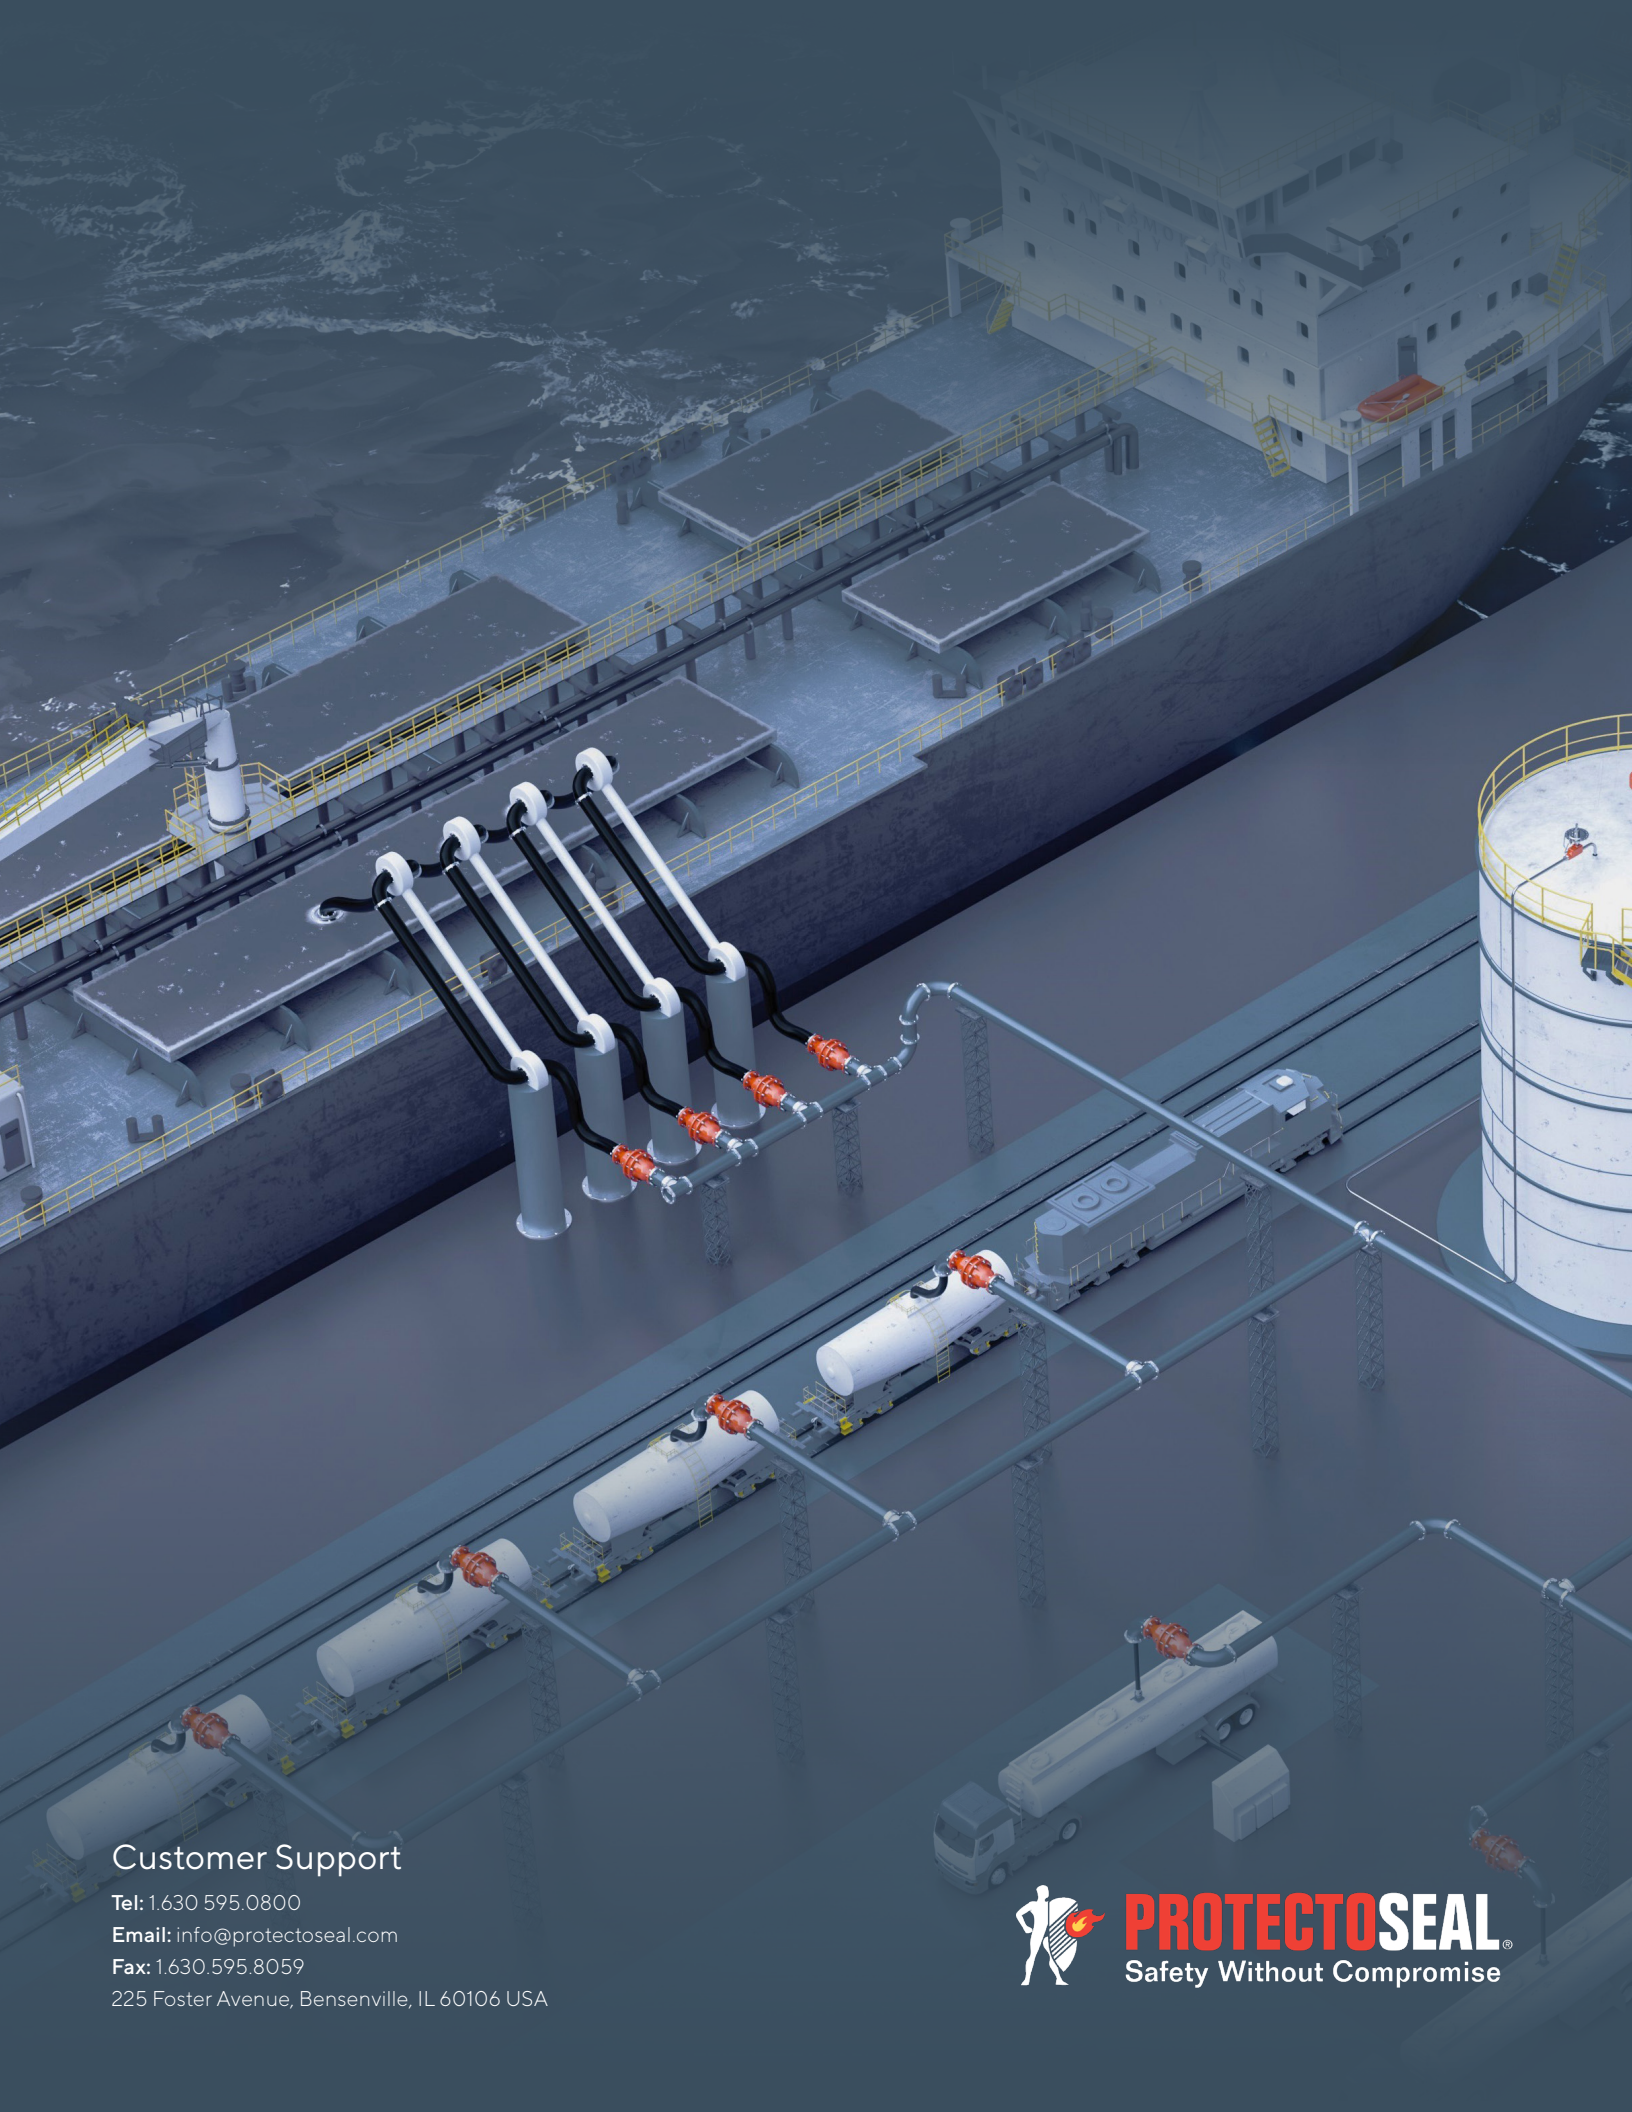

Emergency Relief Manhole Vent
51700

6

Pressure & Vacuum Conservation Vent
8540H/8540G
